# Introduction

- The charts in this presentation use the same data sources as the charts in two April 2020 District Data Briefs. Please see these reports for additional details.
  - [Getting to Accuracy: Measuring COVID-19 by Mortality Rates and Percentage Changes](#)
  - [A Speeding Rate Starts to Slow: COVID-19 Mortality Rates by State](#)
- Since those reports were completed, additional evidence shows that COVID-19 deaths have been underreported, both in other countries and in the United States. The following charts present the latest data from the Center for Systems Science and Engineering at Johns Hopkins University (CSSE) through May 30, with no attempt to further correct for underreporting.
  - Some large revisions in COVID-19 data have been smoothed. See the appendix for details.
- The designs of some charts have been modified from those in the reports to better convey the current status of the COVID-19 epidemic in the United States.
- Hospitalization data come from the COVID Tracking Project at *The Atlantic* and the US Department of Health and Human Services (HHS). See the appendix for details.
- Data by race come from the COVID Tracking Project at *The Atlantic* and the Centers for Disease Control and Prevention. See the appendix for details.

As of May 30, the 14-day COVID-19 mortality rate fell in all Fourth District states and in the United States as a whole.

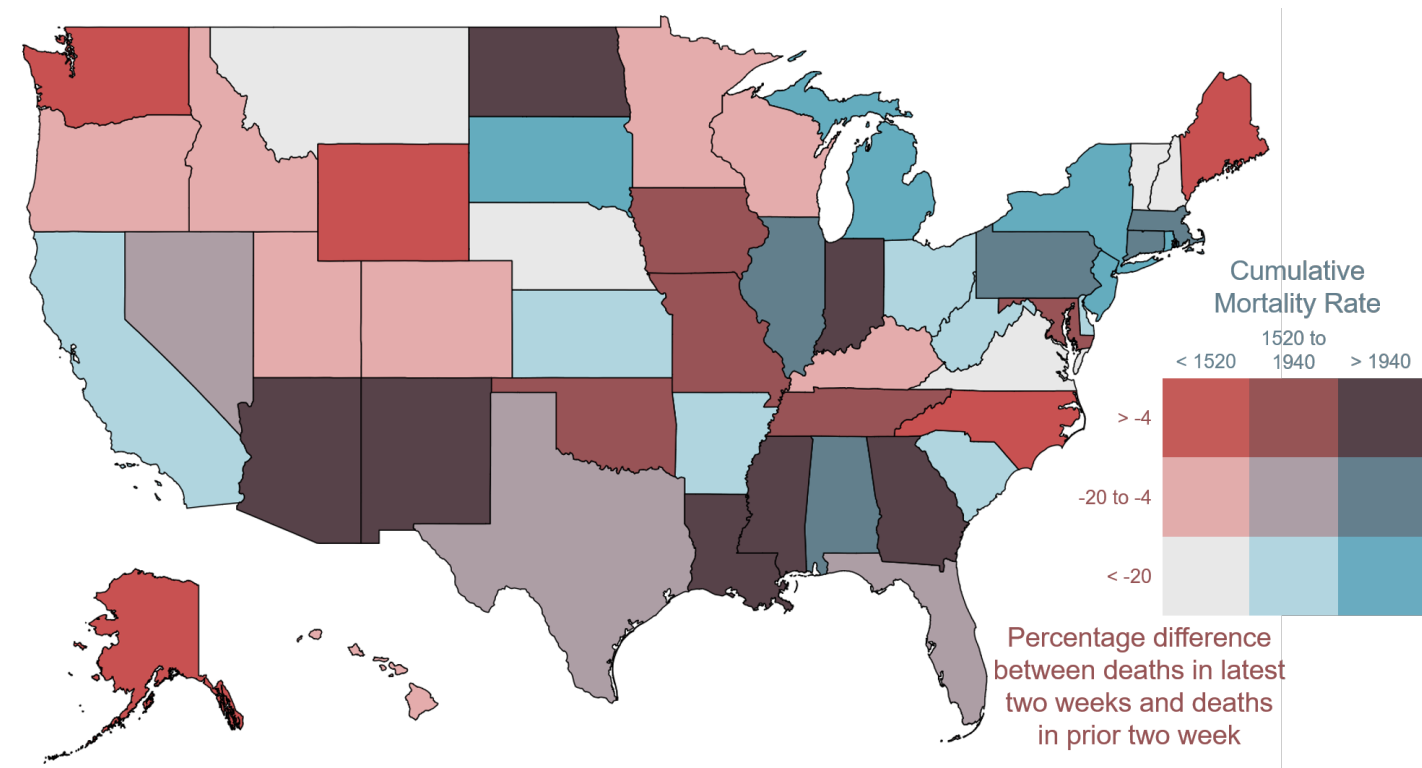

Note: Data through May 30, 2021.

Sources: FRBC calculations, the Center for Systems Science and Engineering at Johns Hopkins University, and Bureau of Economic Analysis.

Note: On March 3, 2021, Ohio began reporting COVID-19 deaths from death certificates only. While this makes the data less subject to revisions, it also means that it may take longer to count a death.

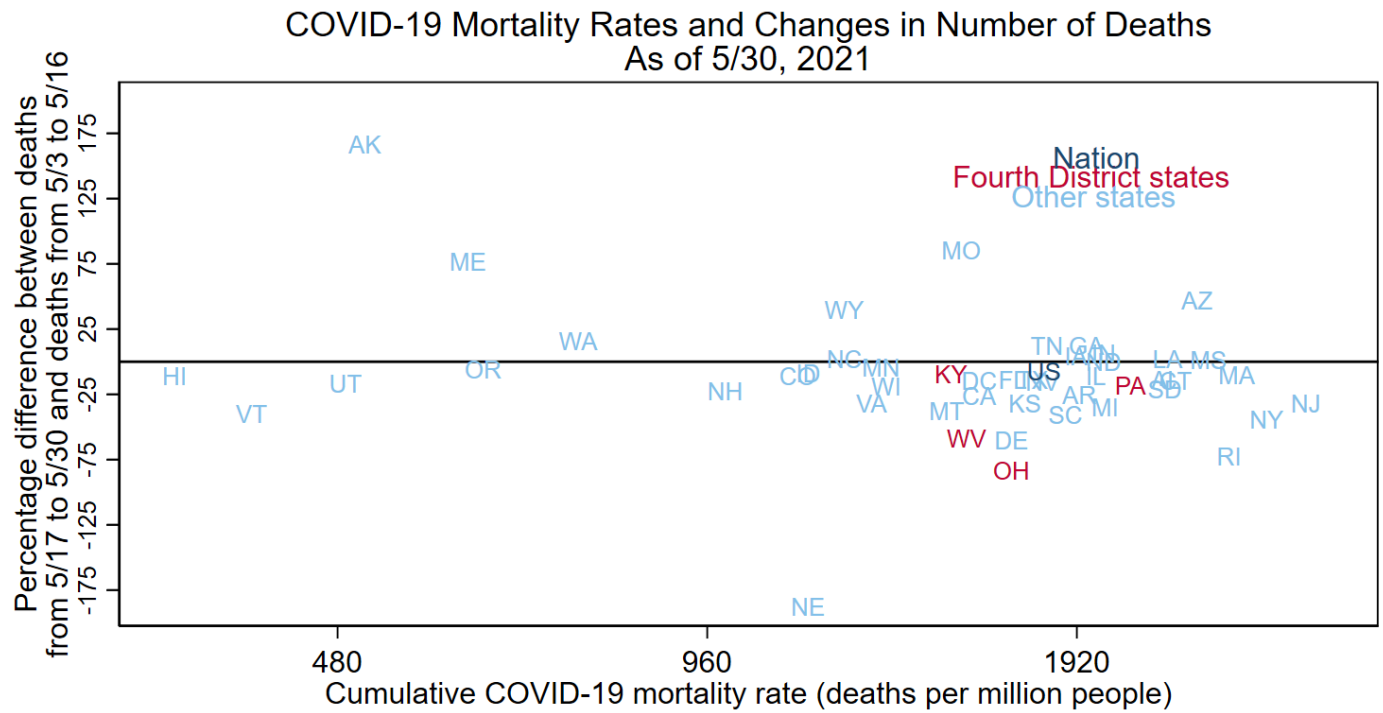

Between May 17 and May 30, the 14-day COVID-19 mortality rate rose in 14 states, including Arizona, Georgia, and Tennessee.

Data for May 30, 2021, accessed on June 1, 2021.  
“Latest two weeks” is 5/17/21 to 5/30/21; “prior two weeks” is 5/3/21 to 5/16/21.  
Sources: FRBC calculations, CSSE, and BEA.

Note: The District of Columbia is in the bin with the mortality rate from 1520 to 1940 and percentage difference from -20 to -4. The color bins on this map are changed with each update to better represent the latest data.

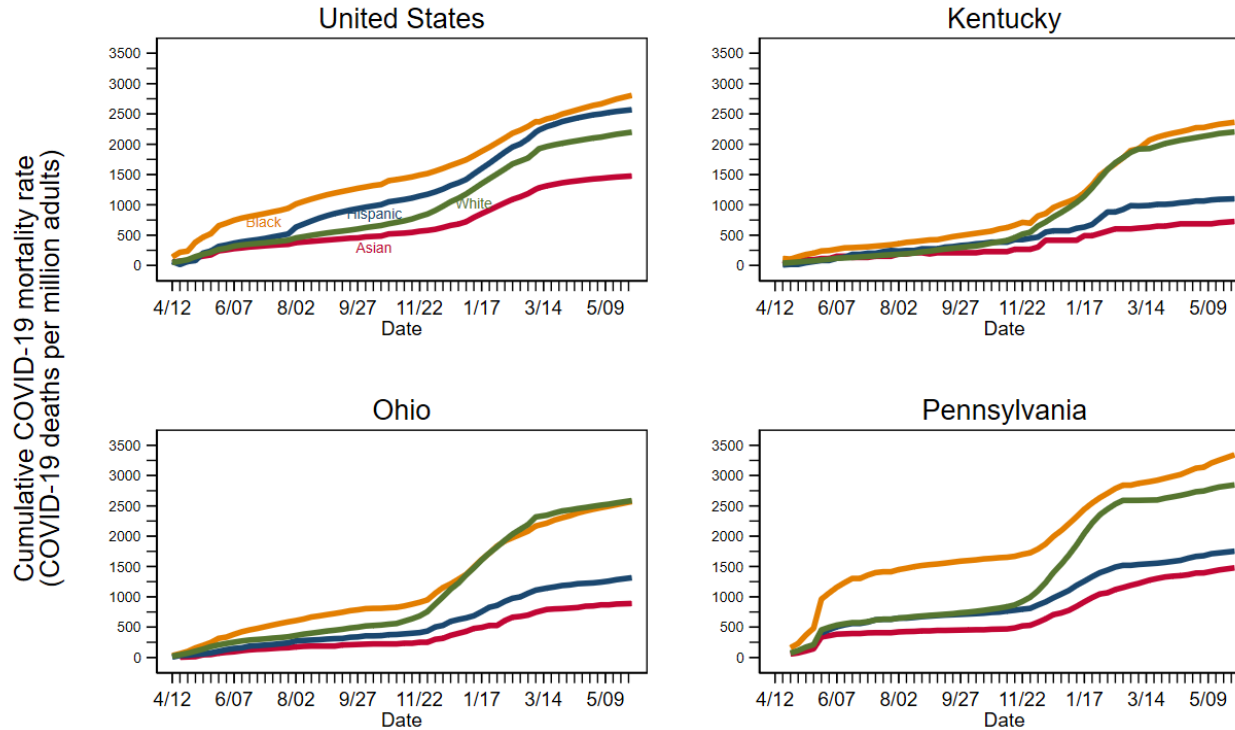

This chart gives similar information to the map, but it is more precise and includes the nation as a whole.

Notes: Horizontal axis has log scale. OK, NM, and MD are excluded as the states' two-week deaths increased by more than 200 percent.  
Sources: FRBC calculations, the Center for Systems Science and Engineering at Johns Hopkins University, and Bureau of Economic Analysis.

The cumulative COVID-19 mortality rates of Black residents and White residents are more similar in Kentucky, Ohio, and Pennsylvania than in the nation as a whole. Hispanic mortality rates are lower in these states than in the nation.

COVID-19 Cumulative Adult Mortality Rate by Race

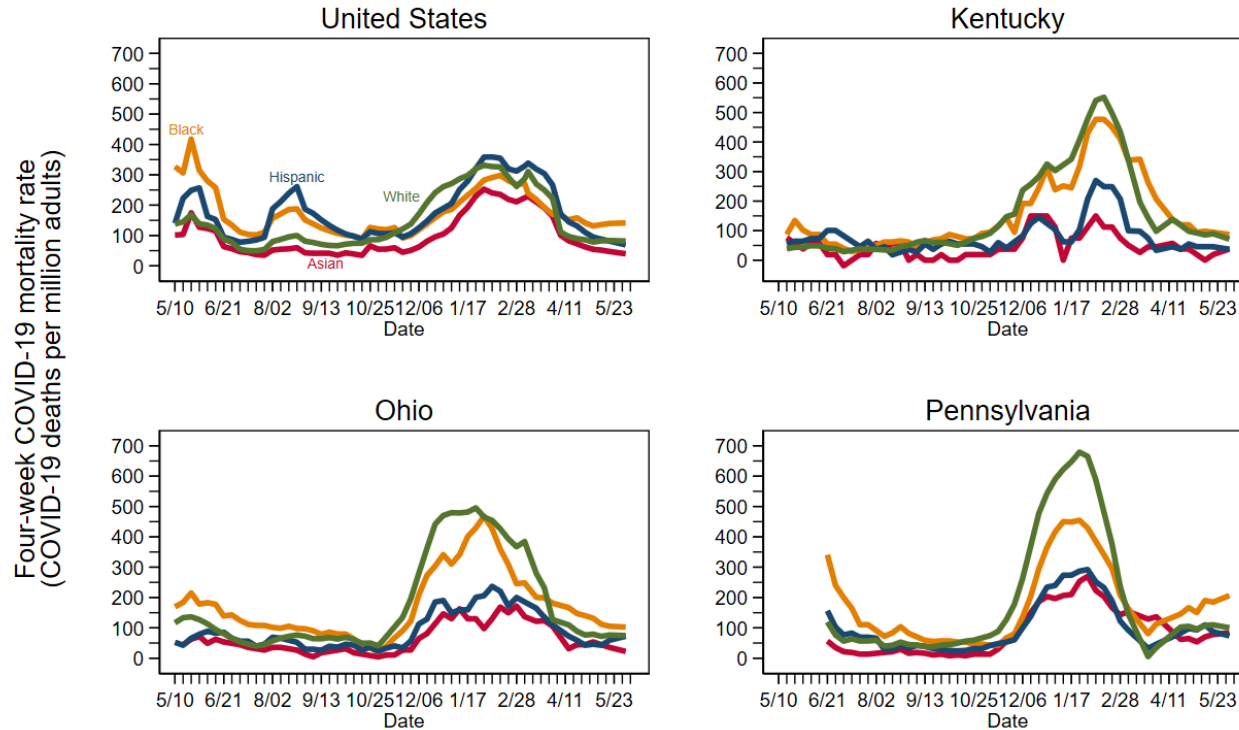

Notes: WV is excluded because race is missing in the data for a relatively high share of WV's COVID-19 deaths.  
Data from 4/12/2020 to 5/30/2021.

Sources: FRBC calculations, Census Bureau's 2019 ACS 5-Year estimates, the COVID Tracking Project at *The Atlantic*, and the Centers for Disease Control and Prevention.

In Kentucky, Ohio, Pennsylvania, and the nation as a whole, Black residents currently have the highest four-week mortality rates.

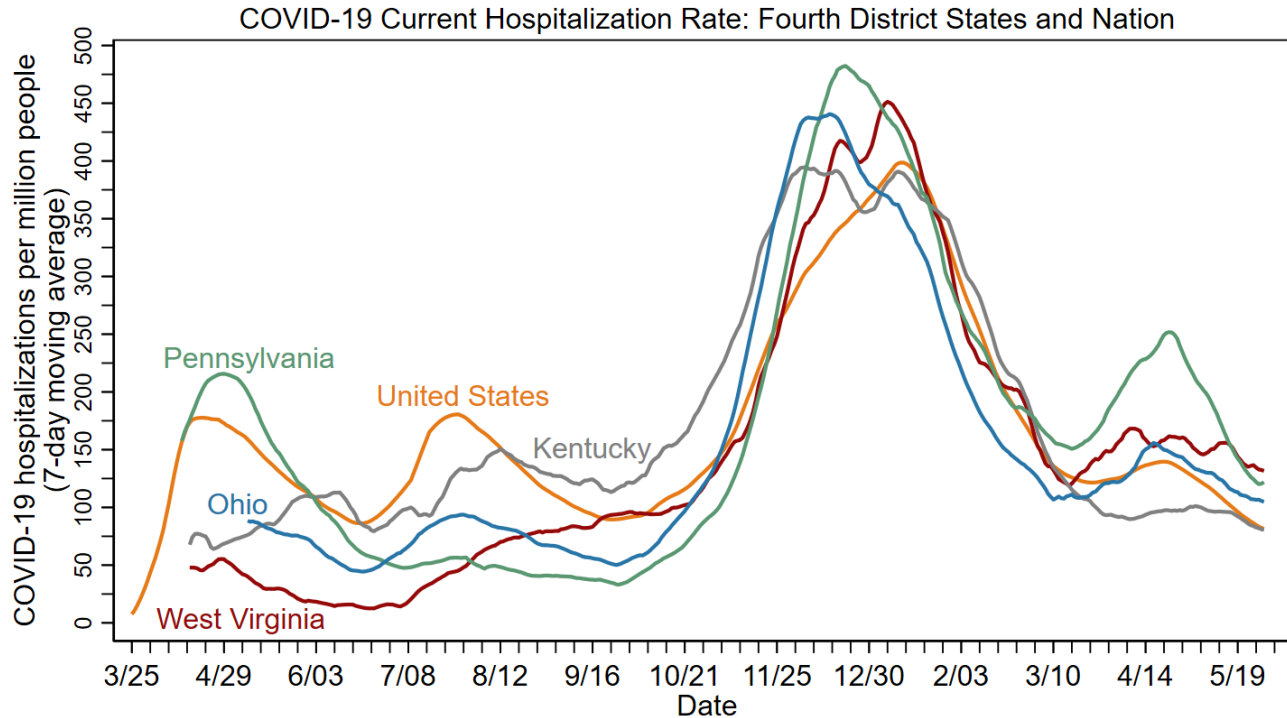

Four-Week COVID-19 Adult Mortality Rate by Race

Notes: WV is excluded because race is missing in the data for a relatively high share of WV's COVID-19 deaths.  
Data from 5/10/2020 to 5/30/2021.

Sources: FRBC calculations, Census Bureau's 2019 ACS 5-Year estimates, and the COVID Tracking Project at *The Atlantic*, and the Centers for Disease Control and Prevention.

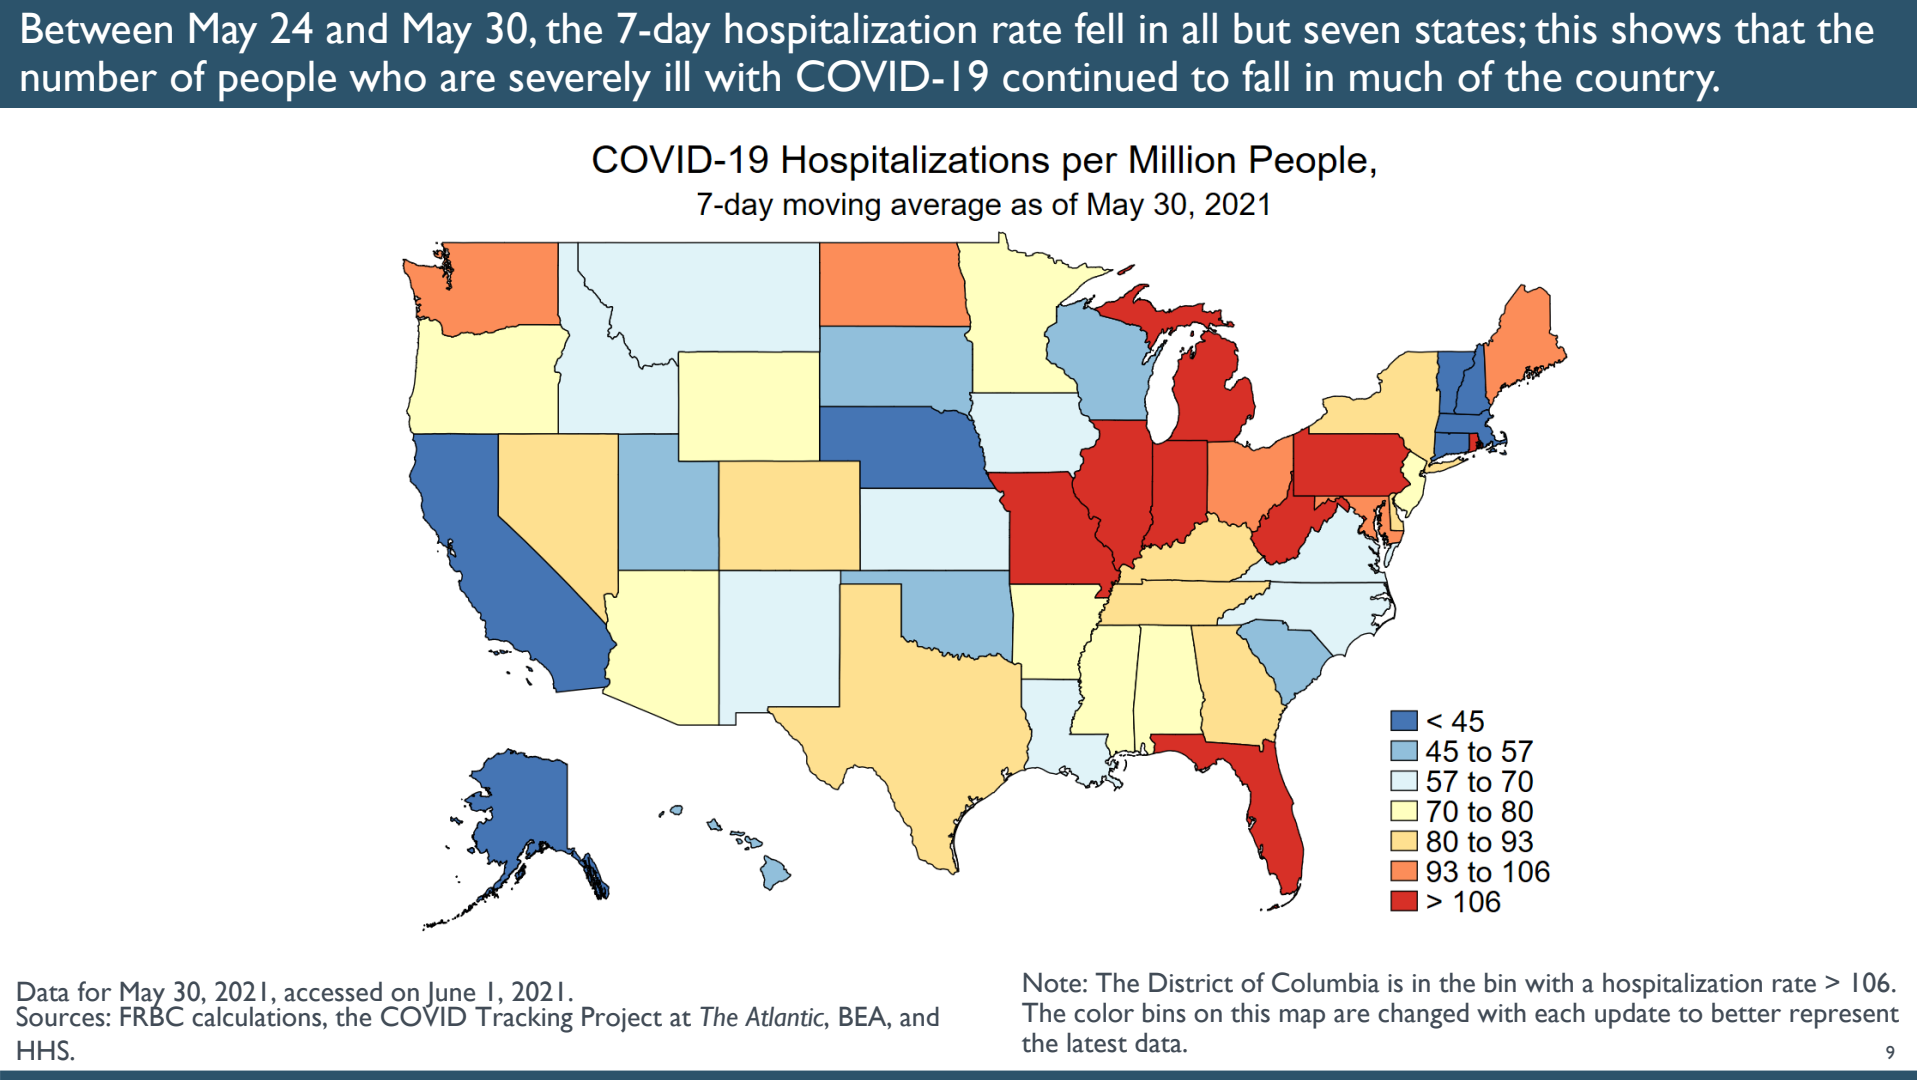

COVID-19 hospitalizations have fallen in all Fourth District states and in the United States as a whole. The continued strong decline in Pennsylvania is especially encouraging.

Note: Data through May 30, 2021.

Sources: FRBC calculations, the COVID Tracking Project at *The Atlantic*, BEA, and HHS.

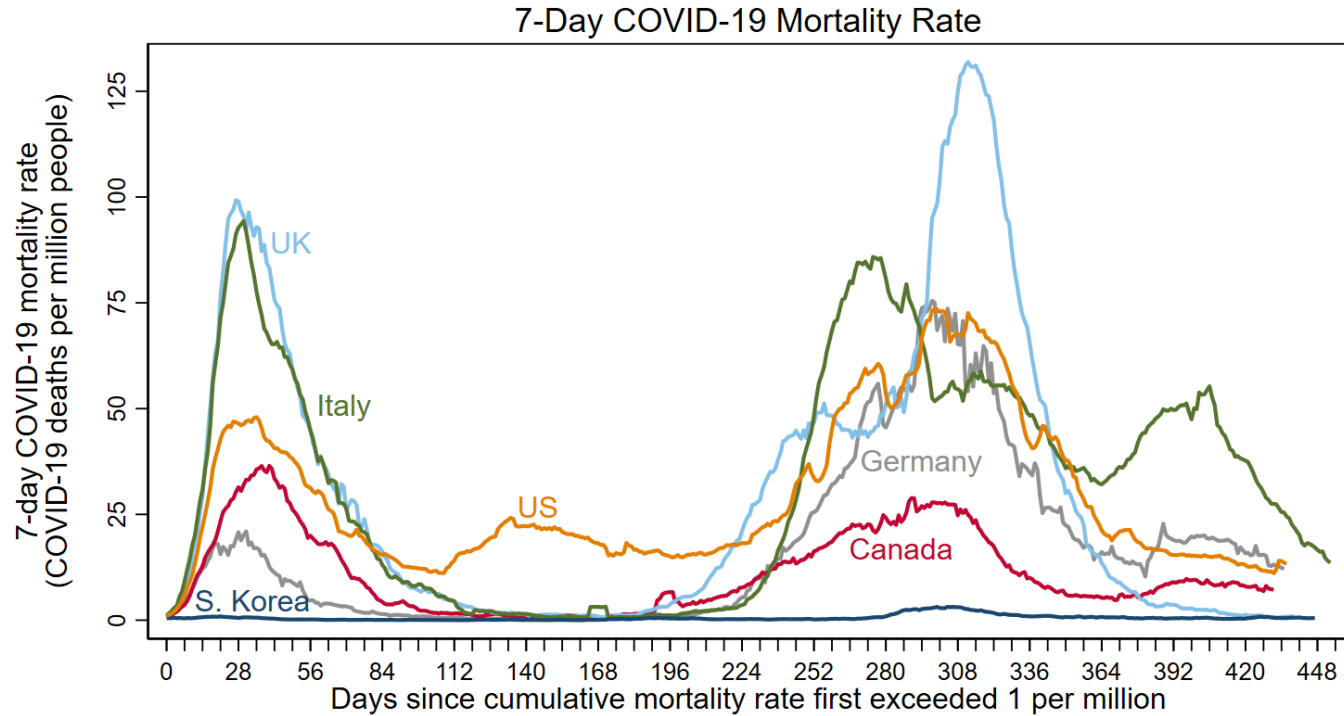

# COVID-19 statistics for Fourth District states and the nation as of May 30, 2021.

COVID-19 Statistic	Kentucky	Ohio	Pennsylvania	West Virginia	United States
<b>Levels</b>					
Average daily deaths in past 2 weeks	10	2	34	3	593
Cumulative deaths	6,782	19,861	27,190	2,792	594,138
Average daily hospitalizations in the past week	360	1,226	1,561	235	26,798
<b>Rates (per million residents)</b>					
14-day mortality rate	30	3	37	20	25
Cumulative mortality rate	1,517	1,698	2,123	1,561	1,806
Average daily hospitalization rate in the past week	80	105	122	132	81
<b>Four-week adult mortality rate by race</b>					
Asian	38	22	84	--	40
Black	87	103	207	60	141
Hispanic	37	73	74	--	69
White	72	75	100	66	82
<b>Cumulative adult mortality rate by race</b>					
Asian	725	890	1,479	--	1,476
Black	2,363	2,572	3,344	1,849	2,806
Hispanic	1,100	1,316	1,752	474	2,570
White	2,203	2,587	2,846	2,019	2,199

Notes: West Virginia's data are missing race for a relatively high share of COVID-19 deaths and the state does not report Asian COVID-19 deaths.

Sources: FRBC calculations, CSSE at Johns Hopkins University, the COVID Tracking Project at *The Atlantic*, BEA, and the HHS.

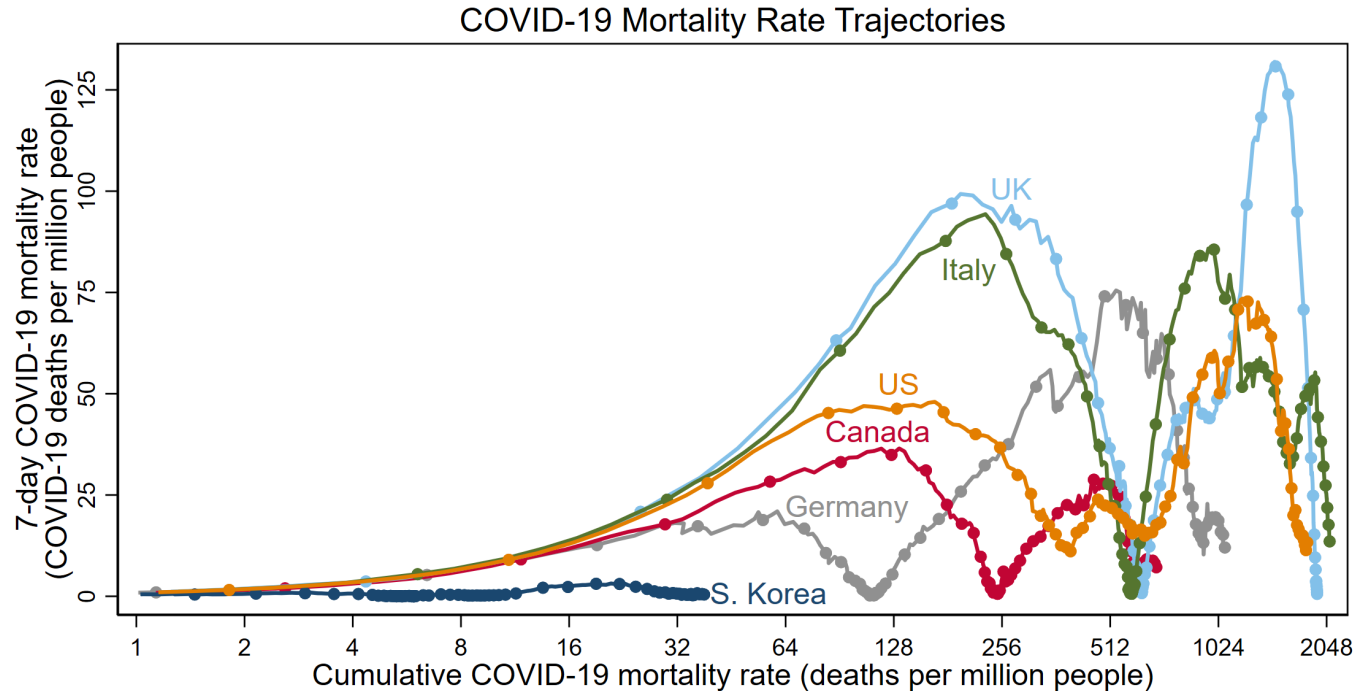

The 7-day COVID mortality rate of the United States has now fallen to levels last seen in early July 2020.

Notes: 3/22/2020 was first day US rate > 1. Data through 5/30/2021.

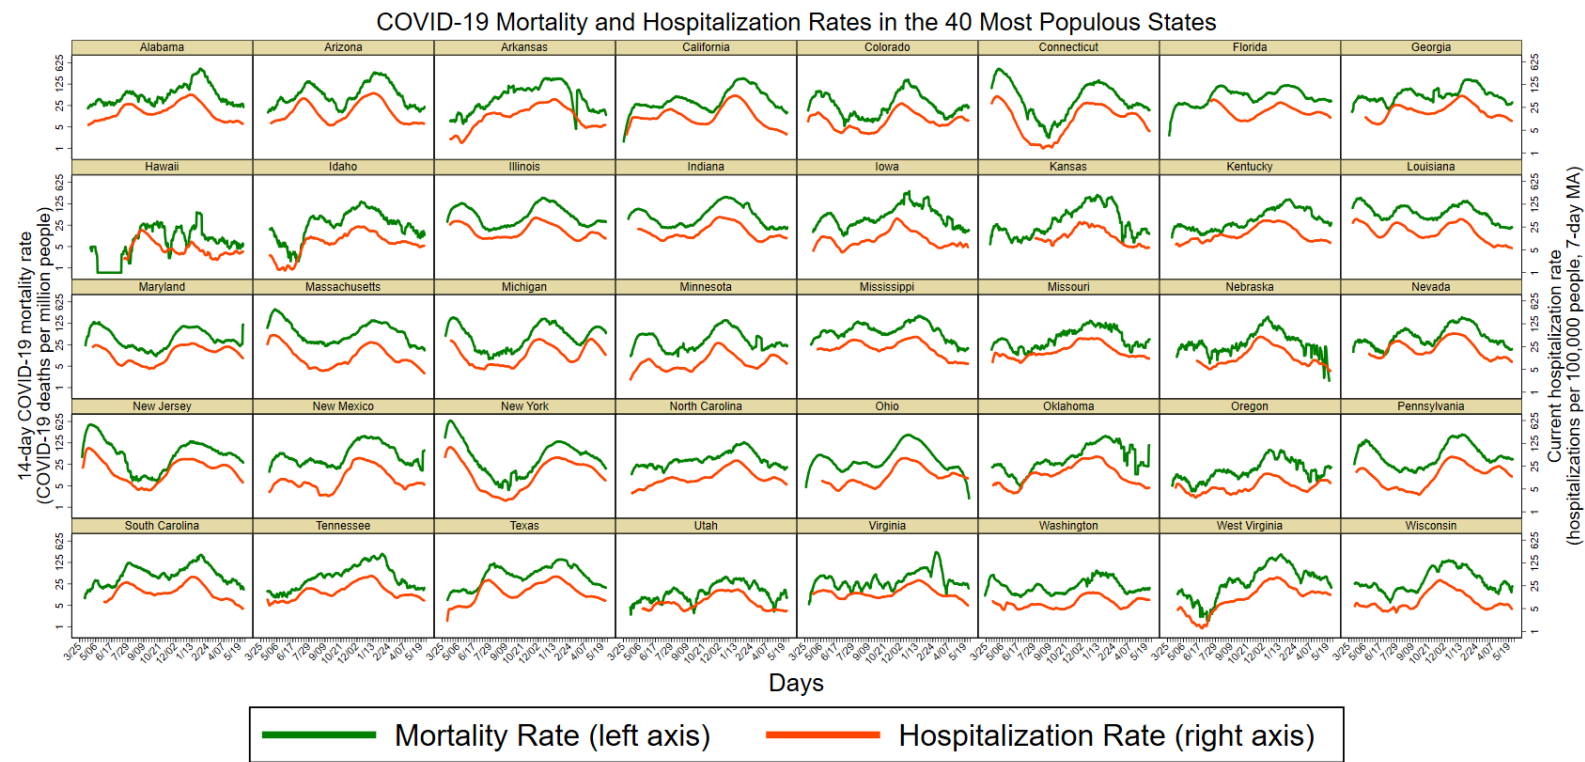

Sources: FRBC calculations, the Center for Systems Science and Engineering at Johns Hopkins University, and the World Bank.

As of May 30, the cumulative COVID-19 mortality rate of the United States is 1,806 deaths per million people. This is almost triple the mortality rate of Canada but below that of Italy and the UK.

Notes: Horizontal axis has log scale. Excluding days when mortality rate < 1. Dots on Sundays to show time. Data through May 30, 2021.  
Sources: FRBC calculations, the Center for Systems Science and Engineering at Johns Hopkins University, and the World Bank.

This chart shows COVID-19 mortality and hospitalization rates for the 40 most populous US states.

Notes: Data from 3/30/2020-5/30/2021. Both vertical axes have log scales.  
Sources: FRBC calculations, the Center for Systems Science and Engineering at Johns Hopkins University, BEA, HHS, and the COVID Tracking Project at *The Atlantic*.

- Series that use different sources at different times
  - Hospitalization data prior to February 1, 2021 are from the COVID Tracking Project at *The Atlantic*. To smooth transition to a new source, the February 2021 data uses a weighted average of the data from the COVID Tracking Project and data from HHS via HealthData.gov, with weight on the COVID Tracking Project falling over time. From March 1, 2021, onward, we use the HHS data.
  - Data by racial groups are from the COVID Tracking Project through March 7, 2021, and from the Centers for Disease Control and Prevention starting on March 8, 2021. The rates we report for racial groups are per million adults, rather than population as a whole, because COVID mortality is closely related to age and racial groups have different age distributions.
- Some significant revisions to the reported number of COVID-19 deaths cause large single-day jumps.
- We smooth some of these jumps by multiplying daily changes for a period of time by a scaling factor so that the adjusted series meets the post-revision series.

## Appendix: Source details and adjustments for data revisions (continued)

- We have used this approach for the following revisions and periods in 2020:
  - Spain revised deaths downward on May 25; data are adjusted from 3/3 to 5/24.
  - New Jersey revised deaths downward on June 25; data are adjusted from 3/10 to 6/24.
  - Illinois revised deaths upward on July 7; Illinois and the United States are adjusted from 3/23 to 7/6.
  - New Jersey revised deaths downward on August 26; data are adjusted from 3/18 to 8/25.
  - US revised deaths up on October 21 for all race categories; data adjusted from 6/6 to 10/18.
- Other data cleaning in 2020
  - Ohio's reported cumulative deaths jumped up on August 29 and reversed on August 30. We set Ohio's cumulative deaths on August 29 to the midpoint of deaths on August 28 and 30 and incorporated this change into the US total for August 29.
  - Ohio's reported cumulative deaths for Hispanic residents jumped up on August 5 and reversed on August 9. We set Ohio's cumulative deaths on August 5 to the average between August 2 and August 9, given data are only available every Sunday and Wednesday.

- **Data cleaning in 2021**
  - West Virginia's reported cumulative deaths for Black residents fell on January 3 and January 6 and reversed on January 10. We set West Virginia's cumulative deaths on January 3 and January 6 to the average between December 30 and January 10, excluding January 3 and January 6.
  - On February 10, Ohio announced that it underreported COVID-19 deaths in November and December and adjusted the data. The CSSE data is adjusted for this change, but the race-level data from the COVID Tracking Project at *The Atlantic* is not. We smooth this jump in the race-level data by multiplying daily changes from November to February 14 by a scaling factor so that the adjusted series meets the post-revision series.
  - Ohio continued to review and revise its COVID-19 deaths after February 14. We smoothed the latest changes by assuming that deaths rose at a steady rate from February 17 to February 28.
  - Virginia revised death counts in the week leading up to February 28, with the guidance that the additional deaths occurred in 2021. Lacking information on when the deaths occurred, we revised Virginia's data so the state's 14-day mortality rate has been constant since January 15.
  - West Virginia revised death counts upward between February 7 and February 14 to account for deaths between December 1, 2020 and January 30, 2021. We smoothed these changes using method described on slide 14.

- **Data cleaning in 2021 (continued)**
  - Death counts of Asian residents were revised on March 17 in Ohio, Pennsylvania, and the United States. Also on March 17, the death counts of all racial groups in Kentucky were revised. We adjusted these weekly series from November 11, 2020, through March 10, 2021, to account for these revisions, using the rescaling methodology described on slide 14.
  - Oklahoma revised death counts upward between April 6 and April 7 to account for deaths between December 1, 2020, and March 31, 2021. We smoothed these changes using the rescaling methodology described on slide 14.
  - Texas pediatric hospitalizations published by HHS contained a 33,000 one-day jump on April 11. We believe this is an error and replaced the one-day change with the average change over the prior 10 days. This jump was included in the national-level data by April 25, and we smoothed the jump similarly.
  - West Virginia revised death counts downward between April 26 and April 27 after an internal review at the state's health department. We smoothed these changes using the rescaling methodology described on slide 14.
