Introduction

• The charts in this presentation use the same data sources as the charts in two April 2020 District Data Briefs. Please see these reports for additional details.
  • Getting to Accuracy: Measuring COVID-19 by Mortality Rates and Percentage Changes
  • A Speeding Rate Starts to Slow: COVID-19 Mortality Rates by State

• Since those reports were completed, additional evidence shows that COVID-19 deaths have been underreported, both in other countries and in the United States. The following charts present the latest data from the Center for Systems Science and Engineering at Johns Hopkins University (CSSE) through January 3, with no attempt to further correct for underreporting.
  • Some large revisions in COVID-19 data have been smoothed. See slide 12 for details.

• The charts have been modified from those in the reports to better convey the current status of the COVID-19 epidemic in the United States.

• Hospitalization rate data comes from the COVID Tracking Project at The Atlantic.
In the two weeks leading up to January 3, the 14-day COVID-19 mortality rate rose in Kentucky but fell in all other Fourth District states and in the United States as a whole.

Note: Data through January 3, 2021. Sources: FRBC calculations, the Center for Systems Science and Engineering at Johns Hopkins University, and Bureau of Economic Analysis.
Between December 21 and January 3, the 14-day COVID-19 mortality rose along much of the East and West Coasts. The 14-day rate fell in many of the Great Plains states.

“Latest two weeks” is 12/21/20 to 1/3/21, “prior two weeks” is 12/7/20 to 12/20/20.
Sources: FRBC calculations, CSSE, and BEA.

Notes: The District of Columbia is in the bin with mortality rate > 1090 and percentage difference > 2 percent. The color bins on this map are changed with each update to better represent the latest data.
This chart gives similar information to the map, but it is more precise and includes the nation as a whole.
COVID-19 hospitalizations tend to presage COVID-19 mortalities. Hospitalizations suggests that mortality rates will continue to fall in most Fourth District states but rise in West Virginia and in the United States overall.

COVID-19 Current Hospitalization Rate: Fourth District States and Nation

Note: Data through January 3, 2021. Sources: FRBC calculations, the COVID Tracking Project at The Atlantic, and BEA.
In the week leading up to January 3, hospitalization rates were highest in the Southwest and Southeast states and lowest in the Northwest and the Great Plains states.

Notes: The District of Columbia is in the bin with a hospitalization rate between 317 and 368. The color bins on this map are changed with each update to better represent the latest data.

Sources: FRBC calculations, the COVID Tracking Project at The Atlantic, and BEA.

The 7-day COVID-19 mortality rate in the United States rose in the past week. The US 7-day mortality rate is just above that of Germany and below that of the UK.
As of January 3, the cumulative COVID-19 mortality rate of the United States is 1,075 deaths per million people. This is more than double the mortality rate of Canada but below that of Italy and that of the UK.
This chart shows COVID-19 mortality and hospitalization rates for the 40 most populous US states.
Appendix: Adjustments for data revisions

- Some significant revisions to the reported number of COVID-19 deaths cause large single-day jumps.
- We smooth some of these jumps by multiplying daily changes for a period of time by a scaling factor so that the adjusted series meets the post-revision series.
- We have used this approach for the following revisions and periods in 2020:
  - Spain revised deaths downward on May 25; data are adjusted from 3/3 to 5/24.
  - New Jersey revised deaths downward on June 25; data are adjusted from 3/10 to 6/24.
  - Illinois revised deaths upward on July 7; Illinois and United States are adjusted from 3/23 to 7/6.
  - New Jersey revised deaths downward on August 26; data are adjusted from 3/18 to 8/25.
- Other data cleaning in 2020
  - Ohio’s reported cumulative deaths jumped up on August 29 and reversed on August 30. We set Ohio’s cumulative deaths on August 29 to the midpoint of deaths on August 28 and 30 and incorporated this change into the US total for August 29.
