Though the headwinds for banks are numerous—modest loan demand, the costs of increased regulation, compressed net interest margins, and cybersecurity risks—to name a few—banks’ profits still rose in 2015.

Highly liquid assets**

FEDERAL RESERVE BANK OF CLEVELAND

Bank year-end profits increased nationwide and in the Fourth Federal Reserve District every year from 2009 to 2015, pulled back slightly in 2014, and have since rebounded.

Highly liquid assets**

The amount of cash and held-to-maturity securities, namely, US Treasuries, that banks hold has grown enormously in the past decade.

Institutions have dramatically increased liquid assets as a result of regulation requiring more liquidity on bank books.

Though some banking metrics moved positively in 2015, the industry is challenged, and there are signs that bankers expect some trouble.

Commercial and industrial loans outstanding has increased each quarter since at least the one that ended June 30, 2011, both nationwide and in the Fourth District.*

Though some banking metrics moved positively in 2015, the industry is challenged, and there are signs that bankers expect some trouble.

Loan demand reportedly has been modest in recent years, but certain lending categories such as commercial real estate and commercial and industrial have posted growth in recent quarters.

As a percentage of total loans, provisions for loan and lease losses increased for the nation as of year-end 2015 after falling since 2009. For the Fourth District,* declines in provisions have shown signs of slowing.

* The Fourth Federal Reserve District comprises Ohio, western Pennsylvania, the northern panhandle of West Virginia, and eastern Kentucky.

** Highly liquid assets are composed of cash and held-to-maturity securities that include US Treasuries.
